

Background

The West Moreton Care at the End of Life Committee was established in July 2018. The original committee was established and governed through West Moreton Health (WMH). In 2019, the Committee evolved into a Collaborative, with a Chairperson from an NGO member and Secretariat from WMH.

Aim

The aim of the Collaborative is to develop partnerships across government and non-government services in order to optimise systems and processes that will improve outcomes for people living with life limiting illness in the West Moreton community.

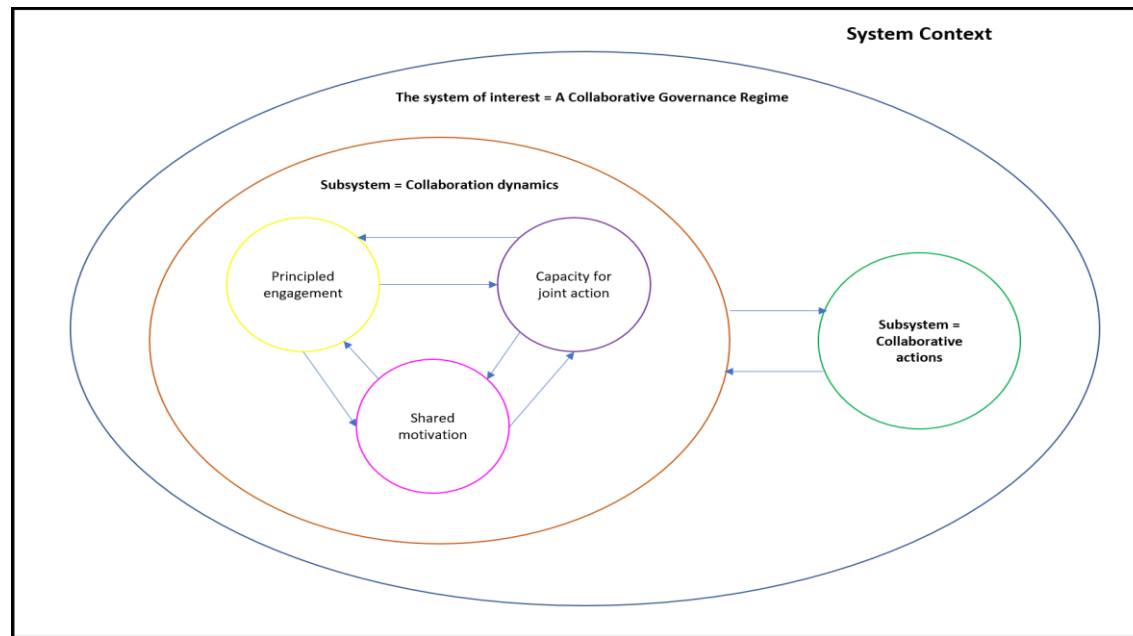

7 Member organisations

13 Member organisations

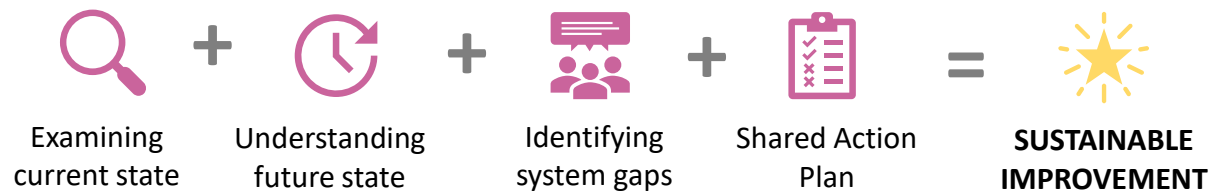

Methods

The Conceptual framework for the West Moreton Care at the End of Life Collaborative is based on Emerson et al's Collaborative Governance System (2012):

The Collaborative came together as a group of interested stakeholders who have a shared interest in improving care at the end of life in the West Moreton region.

An Action Plan for improvement was developed and agreed by the Collaborative:

Results 2018 - 2020

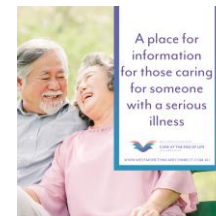

Development and publication of a regional knowledge framework to guide education and professional development across disciplines.

Delivery of a full day, interdisciplinary, interagency (free) care at the end of life forum with over 120 delegates.

Implementation of a toolkit for paramedics to assist with pre-hospital care.

Community asset mapping for compassionate community

Publication of a regional website for community and health professionals: <https://westmoretoncareconnect.com.au>
